# Consumer Confidence Report (CCR) Certification Form

Water	er System Name:Town of Creswell						
	er System No.: _0 49 40 2 0	Report Year: _	2019	Population Served:			
have b with the laborary by the	Community Water System (CWS) named above hereby and 142 requiring the development of, distribution of, and been executed. Further, the CWS certifies the information the compliance monitoring data previously submitted to atory. In addition, if this report is being used to meet Tiese checked box below, the CWS certifies that public notified ance with the requirements of 40 CFR 141.204(d).	d notification of contained in the primacy age of 3 Public Notice 1.	f a consumer the report is ency by their ification requ	confidence report correct and consistent r NC certified nirements, as denoted			
•	Certified by: Name: Ryan Swain		Title:	<b>Public Works Director</b>			
*************	Signature: Kya M. M.	Phone #:	252-796-795	57			
	Delivery Achieved Date: 1/29/21	Date Rep	orted to Stat	e: 1/29/21			
X Not	k all methods used for distribution (see instructions on be Paper copy to all US Mail • Hand Destification of Availability of Paper Copy (other than in the Notification Method Printed on water bill XNotification of CCR URL URL:	livery •	•				
canara	Notification Methodprinted on water billate mailing, email)						
		oddod9 )					
	Direct email delivery of CCR (attached? or emb			ar concrete mailing)			
	Notification Method  Newspaper (attach copy) What Paper?						
	Notification Method stuffer, door hanger, a p						
	stuffer, door hanger, a p	ostcard dedicat	ed to the CC	R, or email)			
	X "Good faith" efforts (in addition to the above required methods) were used to reach non-bill paying consumers such as industry employees, apartment tenants, etc. Extra efforts included the following methods:						
	<ul> <li>posting the CCR on the Internet at URL: _tow.</li> </ul>	nofcreswell.com	n				
	<ul> <li>mailing the CCR to postal patrons within the s</li> </ul>	ervice area					
	<ul> <li>advertising the availability of the CCR in news</li> </ul>	s media (attach	copy of anno	ouncement)			

• publication of the CCR in local newspaper (attach copy)

 $\boldsymbol{X}$  posting the CCR in public places such as:Town Office, 104 South Sixth Street, Creswell, NC

 delivery of multiple copies to single bill addresses serving several persons such as: apartments, businesses, and large private employers

# "2019" Annual Drinking Water Quality Report Town of Creswell

Water System Number: 04-94-020

We are pleased to present to you this year's Annual Drinking Water Quality Report. This report is a snapshot of last year's water quality. Included are details about your source(s) of water, what it contains, and how it compares to standards set by regulatory agencies. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water and to providing you with this information because informed customers are our best allies. If you have any questions about this report or concerning your water, please contact Ryan Swain at 252-796-7957. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held at the Town Hall Meeting Room the second Monday of every month.

## What EPA Wants You to Know

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Town of Creswell is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <a href="http://www.epa.gov/safewater/lead">http://www.epa.gov/safewater/lead</a>.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

The water that is used by this system is groundwater and is located at within Town of Creswell.

Source Water Assessment Program (SWAP) Results

The North Carolina Department of Environment and Natural Resources (DENR), Public Water Supply (PWS) Section, Source Water Assessment Program (SWAP) conducted assessments for all drinking water sources across North Carolina. The purpose of the assessments was to determine the susceptibility of each drinking water source (well or surface water intake) to Potential Contaminant Sources (PCSs). The results of the assessment are available in SWAP Assessment Reports that include maps, background information and a relative susceptibility rating of Higher, Moderate or Lower.

The relative susceptibility rating of each source for Town of Creswell was determined by combining the contaminant rating (number and location of PCSs within the assessment area) and the inherent vulnerability rating (i.e., characteristics or existing conditions of the well or watershed and its delineated assessment area). The assessment findings are summarized in the table below:

Susceptibility of Sources to Potential Contaminant Sources (PCSs)

Source Name	Susceptibility Rating	SWAP Report Date
Well #1	Moderate	March 2010
Well #2	Moderate	March 2010

The complete SWAP Assessment report for Town of Creswell may be viewed on the Web at: <a href="https://www.ncwater.org/?page=600">https://www.ncwater.org/?page=600</a>
Note that because SWAP results and reports are periodically updated by the PWS Section, the results available on this web site may differ from the results that were available at the time this CCR was prepared. If you are unable to access your SWAP report on the web, you may mail a written request for a printed copy to: Source Water Assessment Program – Report Request, 1634 Mail Service Center, Raleigh, NC 27699-1634, or email requests to swap@ncdenr.gov. Please indicate your system name, number, and provide your name, mailing address and phone number. If you have any questions about the SWAP report please contact the Source Water Assessment staff by phone at 919-707-9098.

It is important to understand that a susceptibility rating of "higher" does not imply poor water quality, only the system's potential to become contaminated by PCSs in the assessment area.

We routinely monitor for over 150 contaminants in your drinking water according to Federal and State laws. The tables below list all the drinking water contaminants that we <u>detected</u> in the last round of sampling for each particular contaminant group. The presence of contaminants does <u>not</u> necessarily indicate that water poses a health risk. **Unless otherwise noted, the data presented in this table is from testing done January 1 through December 31, 2019.** The EPA and the State allow us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.

Stage 1 Disinfection Byproduct Compliance - Based upon Running Annual Average (RAA)

Disinfection Byproduct	Year Sampled	MCL Violation Y/N	Your Water (highest RAA)	Range Low High	MCLG	MCL	Likely Source of Contamination
TTHM (ppb)	8/19	N	2.86	N/A	N/A	80	Byproduct of drinking water disinfection
HAA5 (ppb)	8/1 9	N	1.2	N/A	N/A	60	Byproduct of drinking water disinfection

For TTHM: Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

For HAA5: Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

Stage 2 Disinfection Byproduct Compliance - Based upon Locational Running Annual Average (LRAA)

For HAA5: Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

### **Other Disinfection Byproducts Contaminants**

Contaminant (units)	MCL/MRD L Violation Y/N	Your Water	Range Low High	MCLG	MCL	Likely Source of Contamination
Bromate (ppb)				0	10	By-product of drinking water disinfection
Chlorite (ppm)				0.8	1.0	By-product of drinking water chlorination

#### Other Miscellaneous Water Characteristics Contaminants

Other Mineting There	of Characteristics Co	ntammants		
Contaminant (units)	Sample Date	Your Water	Range Low High	SMCL
Iron (ppm)	7/17	0.62	NA	0.3 mg/L
Manganese (ppm)	7/17	0.276	NA	0.05 mg/L
Sodium (ppm)	ppm) 7/17 66.2 NA		NA	N/A
рН	7/17	7.0	NA	6.5 to 8.5
